1. And now we will write a program for running the winch in one direction, the other and, which is VERY IMPORTANT - stops.

2. In order to remotely control our crane, we need a distance sensor. Write a program that turns on the hoist when the sensor shows an approximation. Includes the winch for lowering when the sensor shows a distance.

3. Now independently write the program that controls the winch like the previous one, but with the help of the tilt sensor.

Find the error.

The programmer wrote a program for the robot, which should include a motor for 9 seconds, but the engine somehow works longer.

Explain what this program does.
